

Information for prospective Indian medical students

- (i) Duration of the undergraduate General Medicine programme in Russia is six years. It comprises a total of twelve semesters, with two each in a year.
- (ii) Students in Russian medical universities undergo clinical rotation / clerkship for twelve months or more during the programme.
- (iii) A number of Russian medical universities impart education in English language. However, Indian students need to be proficient in Russian language to undergo practical training which includes interaction with patients who communicate in vernacular language.
- (iv) The diploma awarded by Russian medical universities bears registration number of the competent Russian authority. Students need to clear accreditation examination conducted in Russian language after the final examination in order to be eligible to obtain certificate of license for medical practice in Russia.
- (v) Students seeking admission to any particular university need to find out directly from the university as to whether the university follows the required pre-requisites such as medium of instruction, syllabus, clinical training or internship / clerkship, etc.
